INDIANA STRATEGIC SITES INVENTORY (SSI) PROGRAM

CIRDA Sites: a branded, sector-aligned inventory for the Catalyze Plan

Designate the SSI inventory in CIRDA's ten counties as CIRDA Sites, align every site to the Catalyze target sectors by NAICS code and supply chain role, and run a target sector attraction campaign with a customized story for each county. The plan has a strategy and a credit channel; this gives it the product.

SSI PROGRAM

CENTRAL INDIANA REGIONAL DEVELOPMENT AUTHORITY

Catalyze Plan · November 2026

10	9 of 10	4.0+	5	$1B + $35M/yr
counties in the CIRDA footprint; 32 member communities	counties already reviewed and ranked in SSI workshops; Tipton pending	SSI ranking threshold for CIRDA Site candidacy	Catalyze sectors: human, animal, and plant health; advanced manufacturing; logistics	credits that need a ranked list of places: life sciences initiative and HEA 1406

INITIATIVE LOGIC

Catalyze needs competitive buildings and sites. The plan sets sectors and priorities and HEA 1406 requires a development plan with a list of priority projects and sites. Neither creates the inventory of qualified ground and buildings those projects will land on.

SSI combined with IFRI provide the real estate inventory. Nine of the ten counties have locally ranked SSI greenfield inventories in the SSI Portal, and the Inactive Facility Revitalization Initiative adds the region's idle and underutilized buildings. The missing layer is not discovery; it is sector alignment, a regional brand, and a story each member community can tell.

Build a powerful project attraction marketing campaign. Designating qualified SSI sites and IFRI facilities as CIRDA Sites turns a statewide inventory into the region's own product in months, under a standard CIRDA controls, and gives the campaign a named, documented product to sell in every county.

CIRDA IN AN SSI ECOSYSTEM

Anchor campus	500+ acres, water and wastewater capacity, buffered, rail optional	Lilly at LEAP is the template
Supplier park	50 to 300 acres within 30 to 45 minutes of an anchor, interstate access	Contract manufacturing, packaging, cold chain, instruments
Logistics and distribution	100+ acres on interstate and rail, 24-hour operation compatible	Finished goods, inbound inputs, animal health distribution
R&D and flex	25 to 150 acres near the research base, fiber, business park setting	Diagnostics, agtech, device development
Facility reuse (IFRI)	Existing power, water, and entitlements; inactive or underutilized	Fastest path to a permitted building; HEA 1406 eligible

Every designated site carries one role, its NAICS fit, and its distance to the anchors it serves, so a supplier RFI is answered with the right park, not the whole inventory.

WORKFLOW: SIX STEPS FROM INVENTORY TO CAMPAIGN

1. Pull and rescreen

Extract the SSI inventory for the ten counties; sites ranked 4.0 or higher are the candidate pool. Rescreen the 2021-vintage rankings (Hendricks, Boone, Morgan, Hancock, Madison) against current imagery, parcels, and zoning; hold the 2023 to 2024 rankings (Marion, Hamilton, Johnson, Putnam); run Tipton's first workshop.

2. Align to the Catalyze sectors

Apply Business Attraction by NAICS Code to every candidate site against the plan's sectors: human, animal, and plant health, agriculture, advanced manufacturing, and logistics. Each site carries four-digit NAICS assignments tempered by labor potential within a 45-minute drive time.

3. Map the ecosystem

Place each site in a supply chain role relative to the region's anchors (LEAP, the Indianapolis pharmaceutical and animal health base, IU and Purdue research) and corridors (I-65, I-69, I-70, I-74, CSX and NS rail): anchor campus, supplier park, logistics, R&D flex, or facility reuse. The method is the one built for SSI: Semiconductor for the Orlando Economic Partnership.

4. Qualify and designate

Carry the best fits through Phase II due diligence, a site control pathway, and zoning alignment, then designate them CIRDA Sites against a published standard. Inactive facilities from the IFRI inventory enter in parallel as qualified redevelopment sites for the HEA 1406 development plan.

5. Tell ten county stories

Produce a Site Profile, NAICS brochure, and StoryMap for each designated site and a county narrative that states that county's role in the regional ecosystem, its sites, its workforce, and its infrastructure. Ten stories, one region, one brand.

6. Run the campaign

A CIRDA target sector attraction campaign: sector-specific outreach to site selection consultants and expanding companies, SSI: Signals demand matching to specific CIRDA Sites, co-branded releases with the member communities, and the $1 billion credits and HEA 1406 attached to every pitch.

TEN COUNTIES, TEN STORIES (CANDIDATE ANGLES; RANKING VINTAGE SHOWN)

Boone	2021	LEAP anchor; pharmaceutical manufacturing spillover and supplier demand	**Hamilton**	2024	Headquarters, R&D, and device manufacturing on the US 31 and I-69 corridors
Hancock	2021	I-70 east logistics and supplier park ground; Mt. Comfort corridor	**Hendricks**	2021	I-70 and I-74 west logistics; large-tract distribution and manufacturing
Johnson	2024	I-65 south manufacturing; Franklin and Greenwood supplier sites	**Madison**	2021	Anderson legacy industrial base; IFRI reuse and heavy industrial ground
Marion	2023	Urban reuse and SSI: Community areas of opportunity near the research base	**Morgan**	2021	I-69 corridor emerging; Martinsville and Mooresville mid-size sites
Putnam	2024	I-70 west; agriculture and plant health, Greencastle manufacturing	**Tipton**	pending	Plant health and agribusiness; first workshop under Track A

HOW IT SUPPORTS THE CATALYZE PLAN

Gives the plan its land and buildings
A ranked, sector-coded, controllable site base behind the sector strategy; the piece a tax credit cannot buy.

Feeds the HEA 1406 development plan
Qualified redevelopment sites and priority projects on an objective list CIRDA can rank and IEDC can approve.

Reaches every member community
Each county holds a designated site and a story, so the $1 billion is not a Boone and Marion story alone.

Measurable against the state's terms
Sites designated, RFIs answered, projects landed, and wages against the 125 percent county standard, reported quarterly.

Proposed next step

CIRDA and IEDC authorize a ten-county CIRDA Sites pilot: inventory extract, rescreen, and NAICS alignment in 60 days; first designations with the year-one Phase II cohort; county stories and campaign launch with the first graduations. Scoped under Tracks B, C, D, G, and H of the Site Graduation Program.
