

SSI: COMMUNITY

Pinellas County, Florida

OVERVIEW

SSI: Community is a branch of the Strategic Sites Inventory (SSI) Program that identifies potential high-value real estate assets favorably positioned for project investment as it relates to community redevelopment. SSI: Community is a localized property inventory program dedicated to neighborhood revitalization and economic growth. The program's systematic process takes a comprehensive approach to evaluating the wide variety of factors essential to improving community economic health, the end objective being to provide decision support for complex community redevelopment strategy planning based on objective, a-political data analysis and mapping.

PROJECT LAND USE INTENSITY

The SSI Program is designed to identify competitive greenfield sites across a variety of economic development project land use intensities. Many factors including population density, transportation assets, and development density, to name a few, in conjunction with local industry targets, inform the local project land uses for SSI site identification. SSI: Community for Pinellas County endeavored to identify remaining prospective commercial and industrial properties in a densely developed urbanized setting. Project land use intensities for this project focused on:

- Light Industrial (75+ acres)
- General Agribusiness (25+ acres)
- Distribution/Freight Logistics (50+ acres)
- R&D/Technology (10+ acres)
- Business Park/Medical (10+ acres)

PROJECT NEEDS & OBJECTIVES

AREAS OF OPPORTUNITY

Define geographic areas of opportunity for redevelopment based on relevant GIS data and aerial imagery.

TARGET PROPERTIES

Identify target properties within areas of opportunity for commercial and/or industrial redevelopment.

HIGHEST & BEST LAND USE

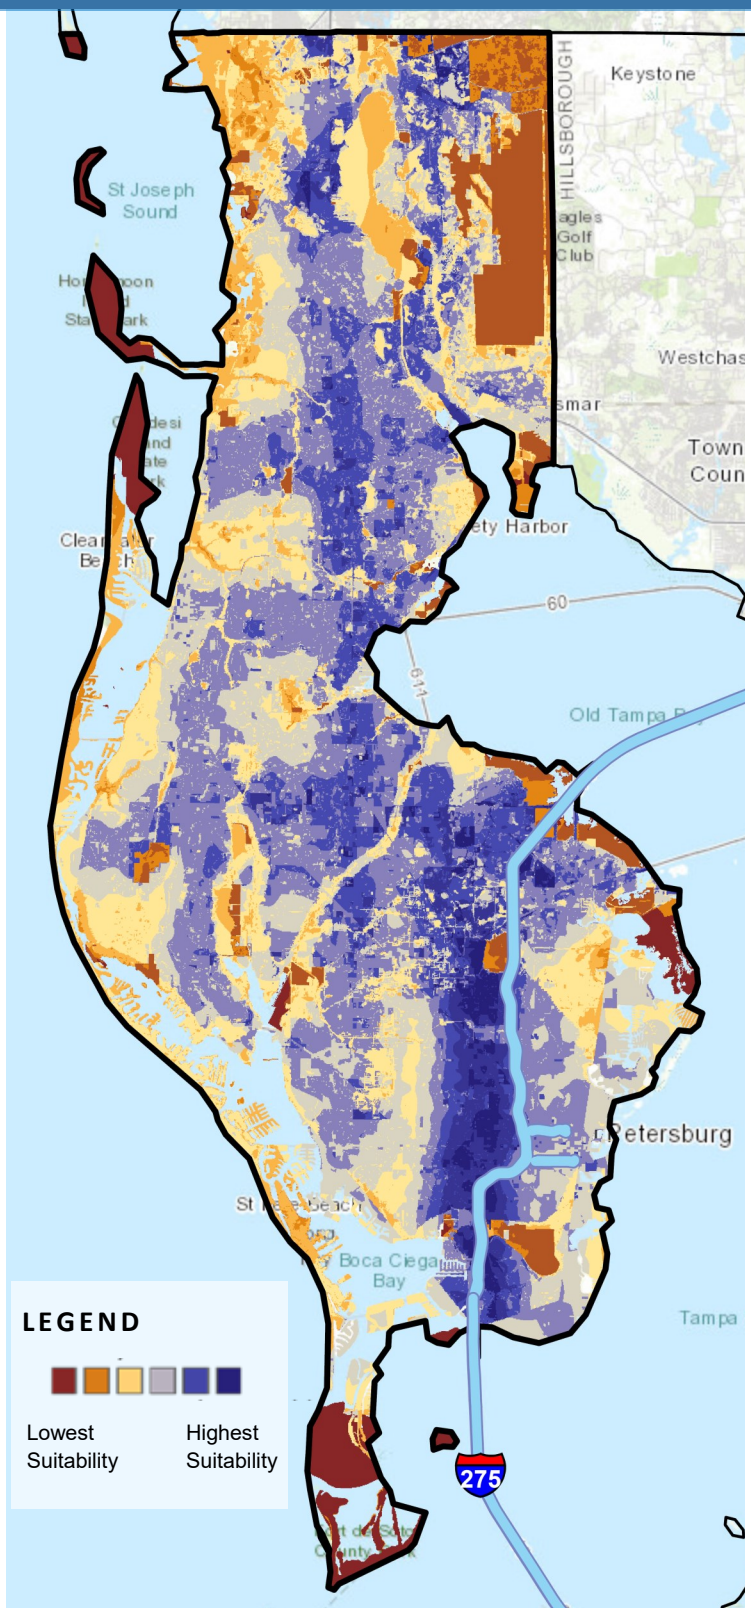

Recommend highest and best land use (e.g., future land use/zoning) for target properties.

SSI : COMMUNITY PROGRAM

METHODOLOGY

DUKE ENERGY

PINELLAS COUNTY ECONOMIC DEVELOPMENT

CORE SUITABILITY MODELING

Displayed left is an overview map of the Economic Viability Baseline Model for Pinellas County. The suitability output combined several components to identify areas that are economically viable for R&D Tech, Manufacturing, and Light Industrial land uses within populated urban zones.

Components that were weighted to produce a reliable suitability output include: transportation hierarchy, population density, employment availability, cultural features, and environmental/surface features.

BUILDING REDEVELOPMENT OPPORTUNITY MODEL

The Economic Viability Baseline Model described above was combined with the following factors to identify objectively opportune areas for redevelopment. These factors formed the Building Redevelopment Opportunity Model used to further refine and select areas of opportunity.

MODEL FACTORS

- Baseline Core Suitability Model
- Age of Building
- Market Rate ($/Sq Ft/Year)
- Percent Leased
- Economic Zone
- Building Class
- Adjacency Score*

** Parcels adjacent to other high-scoring parcels receive an increased score.*

PINELLAS COUNTY ECONOMIC DEVELOPMENT

FOCAL STATISTICS OUTPUT MAP

AREAS OF OPPORTUNITY OVERVIEW

Four separate areas of opportunity were identified throughout Pinellas County. Areas of opportunity are those areas which provide the best opportunity for redevelopment based on neighborhood level data. Factors that drive this determination are socioeconomic and business-level data coupled with local inputs gathered from the Building Redevelopment Opportunity Model. ***The areas of opportunity identified may be used to form a comprehensive redevelopment strategy to encourage job creation, enhance balanced growth, and stimulate overall economic prosperity in Pinellas County, FL.***

AREAS OF OPPORTUNITY MAPPING

Target Parcels are located within the following Future Land Use designations:

AC—Activity Center
E—Employment
I—Industrial
MMC—Multimodal Corridor
O—Office
R&S—Retail & Services

1 HERCULES INDUSTRIAL PARK

2 GATEWAY AREA

RECOMMENDATIONS FOR NEXT STEPS

Immediate Recommendations *(next 1-2 months)*

- **Project Rationale and AOO (Area of Opportunity) Determination**: Utilizing Esri StoryMap, create *visually compelling, GIS-based storyboard to communicate the SSI: Community project rationale and technical approach to Area of Opportunity (AOO) boundary determination.*
- **Candidate Site Nomination**: *Identify top three candidate sites for economic development land use per AOO. Collaborate with county and municipal officials for review of potential sites to determine viability for economic development land use and inform the selection of top site per each AOO.*
- **Highest and Best Use Determination**: *Specify primary and secondary project land use intensities for candidate sites in alignment with respective Pinellas County and municipal target industries.*

Intermediate Recommendations *(next 6-8 months)*

- **Owner Engagement**
- **Formal Due Diligence**

Long-Term Recommendations *(next 12-18 months)*

- **Planning/Performa Development**
- **RFP Facilitation**

Additional Evaluation Options for AOO

- Expanded Demographic Analysis
- Retail Trade Analysis
- Economic Impact Study

Community-Level Site Marketing Products

- Site Profile
- Business Attraction by NAICS
